

# TINNITUS: PAST, PRESENT AND FUTURE

## PROFESSOR DAVID BAGULEY

In this Inaugural Public Lecture, Professor David Baguley will discuss perspectives on tinnitus (the sensation of sound when there is no external source) in the past, in the present day, and future possibilities. He will reflect on why tinnitus can be such a problem, and treatments that are presently available, and on what is under development. His particular research theme is tinnitus and hearing loss associated with certain chemotherapy treatments for cancer, and David will introduce this area, and map out the planned trajectory of the research that is needed. There will be time for discussion and questions, and members of the public are extremely welcome to attend.

**Venue:** A30 Lecture Theatre, Lakeside Arts Centre, University Park, Nottingham, NG7 2RD

**Date:** Tuesday 16th May 6 p.m.

A BSL translator will be in attendance and refreshments will be available prior to the lecture.

### Biography

After studying Psychology and then Audiology at the University of Manchester, and a time working at the MRC IHR Clinical Outstation in Cardiff, David worked clinically at Cambridge University Hospitals. He was the Head of Audiology for over 25 years, and latterly additionally Head of Hearing Implants and of Newborn Hearing Screening. David has written extensively, and has published over 150 peer review papers on a range of topics in Audiology and Otology. His specific research interests are in tinnitus and hyperacusis, and the textbooks he has written, edited and contributed to have been in these areas.

In his role as Professor in Hearing Sciences, University of Nottingham, David will be focussing on tinnitus and associated hearing loss acquired during chemotherapy and medical treatments. David is the current president of the British Tinnitus Association.
